IMMUNIZATION FORM

PROGRAM REQUIREMENT

RETURN FORM TO ACADEMIC CHAIR'S OFFICE

Student Name: _____	Student Program: _____
Student ID: _____	Date of Birth: _____

A health care professional such as a doctor or nurse must complete and sign this form for you and indicate that all immunization requirements listed below are current.

It is recommended you retain a photocopy of this form for future employers. Students will be notified by the campus if requirements change or additional requirements are added. Please make sure to attach any supporting documentation.

Immunizations	Date of Last Vaccine / Blood Test	Initials of Health Care Provider
Diphtheria/Tetanus/Pertussis (dTap) <i>Booster in past 10 years</i>		
Measles/Mumps/Rubella (MMR) <i>Two doses required if born after 1970</i>	#1	
	#2	
Varicella – History of Chicken Pox <i>Indicate Either / Or</i>	Age or Year:	
	Blood Test Results:	
Hepatitis B <i>Exceptions: Cosmetology; Esthetics and Spa Therapies; Recreation Leadership</i>	Dose 1:	
	Dose 2:	
	Dose 3:	
Tuberculosis Skin Test (TST) Two Step <i>(required once every two years)</i> <i>Exceptions unless specified by the campus: Addictions Community Outreach; Behavioral Interventions; Child and Youth Care; Community Disability Supports; Cosmetology; Criminal Justice; Esthetics and Spa Therapies, Funeral Arranging and Directing; Funeral and Allied Health Services, Law and Security; Recreation Leadership, Social Services, Therapeutic Recreation</i>	#1	
	#2	

Health Care Professional (Doctor, Nurse, Pharmacist) who has reviewed supporting documentation & administered any outstanding vaccinations / tests as required:

Name (Please Print): _____ Title: _____

Signature: _____ Date: _____

IMMUNIZATION INFORMATION

The following important information refers to the order and sequence of immunizations. In order to complete NSCC immunization requirements in a timely manner, please adhere to the requirements below.

A. GETTING STARTED

Tuberculin skin testing (TST) is a two-step process that requires **4** visits to the health care provider. **This should be completed before any other immunizations are given.**

Tuberculin Skin Test: Step 1: **Tuberculin skin testing (TST)** should be done **first**. This consists of one dose of TST, which is administered by the health care provider and then read 48 hours later by the health care provider. Each of these steps requires a visit to the health care provider. **Step 2: TST** After the first injection, the second dose should be administered 1 week later. This second dose is read 48 hours after administration. As with the first, this step requires two visits to the health care provider.

Note: if an individual has ever had a 2 –step TST, a one-step is sufficient in the future. However, there is no reason to be concerned if a 2-step is administered. No ill effects will occur and the test reading is not impacted.

B. OTHER IMMUNIZATIONS

After completion of the TST, you can proceed immediately to the other required immunizations and receive them at the same time.

Other immunizations include:

dTap (Diphtheria-Tetanus-Pertussis). Booster dose is required every 10 years.

MMR (Measles, Mumps and Rubella) *

Varicella (chicken pox)*

Hepatitis

NOTE - immunizations noted with a * are live vaccines. If you receive an immunization with a live vaccine, you must wait 30 days before administering TB testing. This may significantly impact the requirement to complete immunizations by a required deadline. Within the NSCC requirements, there are 2 live vaccines that can impact this: Measles, Mumps and Rubella (MMR vaccine) and Varicella vaccine.

These live vaccines can be administered together at the same time. If they are not administered at the same time, they must be administered no sooner than 30 days apart.

Immunization Status:

If your immunization status is unknown, you can have blood work done to confirm immunity for MMR, Hepatitis B and varicella chicken pox. If blood work confirms immunity, this can be noted on the NSCC immunization form, and no further immunization is required.
