

Partial Tool List etc. for Refrigeration & Air Conditioning

You **will not need to bring any tools to class the first week**, and we will talk about required hand tools and shopping tips the first week. Here are the main hand tools you will need by the second week.

- Plier set
- Screwdriver set
- Measuring tape
- Pocket knife
- Adjustable wrenches (10-12 inches)
- Inspection light
- Wire strippers/crimpers

I am hoping you all complete your WHMIS and OH&S online before you get here.

All other safety milestones will be covered in the first couple of weeks, so, **if you have proof of any current certifications in the following courses**, please bring them with you (you may not have to repeat them).

Safety course

- **Fall Protection**
- **Hazard ID and Assessment**
- **Respiratory protection**
- **Lock-out tag-out**
- **Confined space entry**

We will also be completing a first aid course together in October. I believe the cost will be around \$101.00

Book packages will be available in the bookstore

The first couple of days will be pretty relaxed and informal – a chance to get comfortable with the institution and our class, and an introduction to the course, safety awareness, and the best trade out there – Refrigeration and Air Conditioning!

While the first few days are pretty relaxed, it is important that you attend. Any safety milestones that you miss will have to be made up in order to move on.
